

ABOUT US

Compu-Teck Access Floors is a dedicated industry leading provider of innovative next generation solutions for raised access floor, structural ceiling, containment and data center decontamination. After 10 years as a construction/renovation contractor, since 1992 we've been a client optimized resource for Commercial/Industrial/Government applications for data centre, control room, white room, gaming, casino, health care and office towers.

Our long-established reputation for outstanding consulting, design, project execution and delivery has rewarded us with numerous favored partner status in the private and public sector.

In 2006, we were chosen to be Quebec's exclusive distributor of products from Tate Inc, member of the Kingspan Group, the largest manufacturer of building envelopes, insulation panels and access floors.

RAISED FLOOR

Our wide range of highly adaptable, cost-effective access flooring such as ConCore[®] steel-concrete, AllSteel[®] and exposed concrete Stoneworks[®] panels addresses a variety of needs (height, loading and seismic) for new and existing applications. Our high-end architectural finishes (porcelain, wood, vinyl HPL and ESD) allow commercial buildings to create a signature style while maintaining the sustainability, high-performance, and long-term return on investment advantages associated with a flexible and adaptive raised access floor.

STRUCTURAL CEILING

Our structural ceilings are the ideal solution for any data centre application where large heavy items need to be suspended within a building.

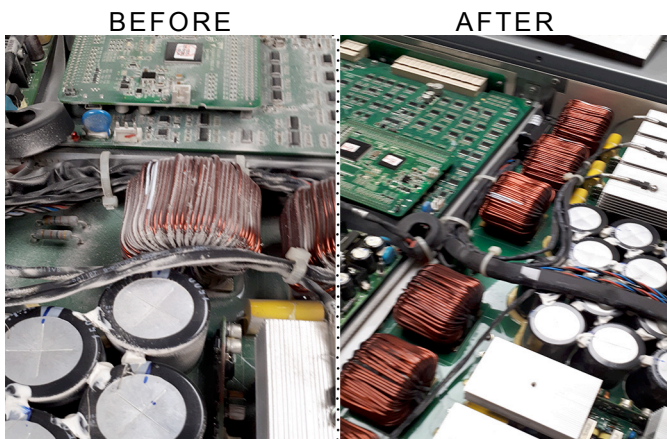

Replacing custom-built on-site structural systems, such as Unistrut, with Tate Grid allows you to design and specify a support system that is less expensive and faster to install.

CONTAINMENT

Aisle containment, the separation of cold supply air from hot exhaust air, is one of the most popular strategies in data center design. Our products offer cost-effective and energy-efficient solutions to maximize performance and create a flexible infrastructure. Our innovative products control costs by providing increased durability and adaptability for future expansion and change, along with simple, low-cost installation and maintenance requirements. Our hard roof panel with drop away tiles can be used under water sprinkler system and hinged as well as sliding doors are available.

DECONTAMINATION AND CLEANING

Our trained and equipped technicians can test, evaluate, service and certify compliance in your structural room (surfaces and equipment). We test for airborne particle counts in .3, .5, 1, 3 & 5 micron sizes, temperature, humidity, airflow, 'Zinc Whisker' contamination, and static decay rates for static dissipative and conductive floors. We also provide structural inspections for access floors/ceilings during the cleaning process. All of our equipment is 'cleanroom safe' and is superior to data centre specifications. At all times, your equipment can remain in operation.

ACCESSORIES – RAMP – GUARD-RAILS

We offer many raised floor and ceiling accessories, such as, grills, grommets, blanking panels and suction cups. We custom make guardrails and handrails for stairs and access ramps. Our anodised aluminium tubes (1.5" and 1.9") and cast aluminium fittings will provide a safe and professional solution for any environment. Even in odd dimension spaces, our guardrails and hand rails will dovetail impeccably.
